

We have performed the given below stages to create the **Data Visualization**.

- 1. Dataset Download:-**Download the product positioning dataset in CSV format from the provided source or project repository. Save the file in a dedicated project folder for easy access.
- 2. Data Import:-**Import the CSV dataset into a data analysis tool such as Microsoft Excel or Tableau. Verify that all columns and records are imported correctly.
- 3. Data Inspection:-**Review the dataset to understand its structure, including the number of rows, columns, data types, and available variables. Identify key fields such as Product Category, Brand, Sales Volume, Customer Rating, Price, and Foot Traffic.
- 4. Data Cleaning:-**Remove duplicate records, correct formatting issues, handle missing values (by replacing or removing them), and fix any inconsistent entries. Ensure numerical values are stored as numbers and dates are properly formatted.
- 5. Data Validation:-**Check the dataset for accuracy and consistency. Verify that values fall within expected ranges and that there are no invalid or incorrect records.
- 6. Data Transformation:-**Convert data into suitable formats if required. Create calculated fields, rename columns for better readability, standardize text values, and prepare the data for visualization.
- 7. Data Filtering:-**Apply filters to retain only relevant records for analysis. Examples include filtering by product category, brand, sales region, customer segment, or date range to focus on specific business questions.
- 8. Data Verification:-**Perform a final review to ensure the processed dataset is clean, complete, and ready for visualization and analysis in Tableau.
- 9. Data Visualization Preparation:-**Load the preprocessed dataset into Tableau, establish field types, and begin creating charts, dashboards, and visualizations to answer the project's business questions.

Business Question-1: Which product category generates the highest average sales volume?

Business Question-2: How does product placement (Shelf Level, End Cap, Eye Level, etc.) affect average sales volume across different product categories?

Business Question-3: Which product categories perform best during different seasons?

Business Question-4: How does our product price compare with competitors' prices, and is our pricing competitive?

Business Question-5: Which consumer demographic groups (Age Group, Gender, Income Level, etc.) contribute the most to sales volume?

Business Question-6: Does higher store foot traffic lead to higher average sales volume?

Business Question-7: How do product prices vary across different product categories?

Business Question-8: How do promotional campaigns influence product prices and sales volume across different product categories?

Promotion of Product Category on Price and Sales Volume			
Promotion	Product Category	Avg. Price	Avg. Sales Volume
No	Clothing	27	1,869
	Electronics	27	1,726
	Food	28	1,677
Yes	Clothing	29	1,781
	Electronics	29	1,773
	Food	29	1,782
