

Project:Strategic Product Placement Analysis

Dashboard:

Product Placement Performance Analytics

This treemap compares sales volume by product category and placement location. It helps identify the most effective product placements to maximize sales performance.

Product Placement Performance Analytics

This visualization evaluates the effect of seasonality on average sales across product categories. It demonstrates that seasonal products outperform non-seasonal products, supporting seasonal inventory and marketing strategies.

Product Placement Performance Analytics

This visualization analyzes the relationship between product prices and competitor prices across categories. It provides insights to optimize pricing strategies while maintaining a competitive advantage.

Product Placement Performance Analytics

Sales volume is balanced across consumer demographics, showing no single segment dominates the market. A broad, inclusive marketing approach can maximize overall sales performance.

Product Placement Performance Analytics

Products placed in high-traffic areas, particularly the front of the store and aisles, generally achieve stronger average sales. Strategic placement in high-visibility locations can maximize customer engagement and revenue.

Product Placement Performance Analytics

Promoted products consistently achieve higher average sales volumes than non-promoted products across all categories. This highlights the positive impact of promotional campaigns on improving product performance.

Promotion	Product Category	Avg. Price	Avg. Sales Volume
No	Clothing	27	1,869
	Electronics	27	1,726
	Food	28	1,677
Yes	Clothing	29	1,781
	Electronics	29	1,773
	Food	29	1,782
